

Amdocs Interview Experience

Vijay Vishvkarma

Round 1:

it was online test , there were 5 sections in which English, aptitude, code snippet and OOPS and coding question were there.

Code was not that much tough but time was not enough for 3 ques just 60 minute. I solved 49 ques out of 55 , and I got selected for the next round.

Round 2:

As I mentioned java in my resume , I was fearing that maybe interviewer will go in deep in java ,I was ready for that also but still fearing ,so I started with greetings, I said good afternoon ma'am ,and she told me to introduce myself ,I gave my short intro to her ,and after that she asked me to choose one of the programming language either c++ or java at that time I understood that now I'm equal to all the classmates,my fear had disappeared. Then she asked me that are you confident with data structure and algorithms ,I replied yes with confidence.so she asked me a simple but tricky ques, find all duplicate elements in the array, It seems to be very easy with simple methods , but she wants optimal approach I gave her 3 approaches and she was satisfied, after this she told me to choose my favourite data structure, I chose linkedlist,I was prepared with other data structures also because maybe she will not test my strength,but as I was thinking she will not ask ques of my favourite ds, she asked about circular linkedlist,and after that asked about cycle detection ,I gave answer with different methods and she was satisfied, after that she

changed the section and asked arr u confident with oops, I said yes, then she asked me what is oops why it is use, then asked about pillar of oops in detail with example, and I was answering this questions and she turned off camera and went somewhere. I answered and she asked next ques what is abstraction and how it can achieved in java. Then next section DBMS she asked about transaction ,acid property and again she went somewhere, I did my duty and she came again and aksed me about sql query, 3rd highest salary from employee table ,I gave her limit solution she didn't ask any other approach , then she came to my first project which I mentioned in my resume *online doctor appointment* why u made this , what is its features , did u implemented a functionality like when two employee want same doctor appointment at the same time and same time they login ,then who will get the appointment(basically she wanted to check concurrency control in my project)but I said no, I implemented that no one can book appointment of same time of same doctor (no duplicacy) then she asked me ,did u deploy ur project ,I said yes, and I told the procedure, and she was impressed with it, and she asked one and toughest ques of my interview, * make the ER diagram of your project database* ,as I had knowledge of dbms ,I know how to draw ER diagram but for this I need to know the table name of my database, I forgot the tables name, as I was thinking that she can't say to open my project, if she will tell to open my project I have to cut the meet. so I was assured that she can't say to open the project database , so I thought 2 -3 table name related to project and gave relationship between them. And she was partially satisfied because I took 2 minute time to think. and at the end she asked any query I

asked as I know company work mainly on java but what other technology on company work.

Round3:

For the last and final round(HR) I got mail after 15 minute of my interview ,and meet was at 1:45 after 1 hour later of my technical interview.so I prepared for HR round also,she asked to give me intro ,I changed my intro according to HR round in this format given below.

1 Tell me about your self

- a. Your Name
- b. Place Information
- c. Education in Short
- d. Family details in Short

I am xyz. I am from xyz.. i have completed my graduation from xyz... Now i am pursuing master of computer application. My hobbies are playing chess and singing...
